

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1                   1.       (currently amended) A method for processing customer requests  
2 ~~determining for~~ spare capacity ~~for in~~ a video and data network from a network element database  
3 comprising:  
4                   receiving a customer inquiry for a request for spare capacity in the video and data  
5 network ~~for from~~ a customer requesting a service for the video and data network, wherein the  
6 request comprises a service area identifier corresponding to the customer;  
7                   identifying equipment to check for spare capacity from the service area identifier,  
8 wherein the equipment identified is used to provide the service to the customer on the video and  
9 data network;  
10                  determining if the identified equipment has spare data and video capacity using  
11 real-time information for the identified equipment in the network element inventory; ~~and~~  
12                  if the equipment has spare data and video capacity, calculating spare video and  
13 data capacity for the equipment, wherein the spare video and data capacity is used to provide the  
14 service to the customer, if desired; and  
15                  providing an answer for the request for spare capacity while being connected to  
16 the customer during the customer inquiry, the answer based on the spare video and data capacity  
17 calculation.

1                   2.       (previously presented) The method of claim 1, wherein the video and data  
2 network comprises a Digital Subscriber Line (xDSL) network.

1                   3.       (previously presented) The method of claim 1, wherein the video and data  
2 network comprises a Very high data rate DSL (VDSL) network.

1                   4.       (previously presented) The method of claim 1, wherein calculating spare  
2 video/data capacity for the equipment comprises calculating a number of video and data ports  
3 available minus a number of video and data ports in use.

1                   5.       (previously presented) The method of claim 4, further comprising  
2 determining possible capacity for the equipment.

1                   6.       (previously presented) The method of claim 5, wherein possible capacity  
2 comprises possible video/data ports.

1                   7.       (previously presented) The method of claim 6, wherein calculating spare  
2 video/data capacity for the equipment comprises adding the possible video/data ports to the spare  
3 video/data capacity calculation.

1                   8.       (previously presented) The method of claim 7, further comprising  
2 determining a number of defective video/data ports.

1                   9.       (previously presented) The method of claim 8, wherein calculating spare  
2 video and data capacity for the equipment comprises subtracting the number of defective  
3 video/data ports from the spare video/data capacity calculation.

1                   10.      (previously presented) The method of claim 4, further comprising  
2 determining a number of held and pending video service orders for the service area identifier.

1                   11.      (previously presented) The method of claim 10, wherein calculating spare  
2 video and data capacity for the equipment comprises subtracting the number of held and pending  
3 video service orders from the spare video/data capacity calculation.

1                   12.      (previously presented) The method of claim 1, wherein checking the  
2 network element database to determine if the identified equipment has spare data and video  
3 capacity comprises checking if the identified equipment has spare physical video/data capacity.

1                   13.     (previously presented) The method of claim 1, wherein checking the  
2 network element database to determine if the identified equipment has spare data and video  
3 capacity comprises checking if the identified equipment has spare physical video/data capacity.

1                   14.     (currently amended) The method of claim 4, further comprising  
2 determining a number of data only ~~slots~~ports.

1                   15.     (currently amended) The method of claim 14, wherein calculating spare  
2 video and data capacity for the equipment comprises returning the number of data only ~~slots~~  
3 ports in the spare capacity calculation.

1                   16.     (previously presented) The method of claim 1, further comprising  
2 checking the network element database to determine if the identified equipment telephony usage  
3 is at a maximum.

1                   17.     (currently amended) A method for processing customer requests for  
2 services on a video and data network, the method comprising:

3                   receiving a customer inquiry for a request from a customer for a service on the  
4 video and data network;

5                   determining a service area identifier for the customer;

6                   ~~receiving a request for spare capacity in the video and data network, wherein the~~  
7 ~~request comprises the service area identifier for the customer;~~

8                   identifying equipment to check for spare capacity from the service area identifier,  
9 wherein the equipment identified is used to provide the service to the customer on the video and  
10 data network;

11                   determining if the identified equipment has spare data and video capacity using  
12 real-time information for the identified equipment in the network element inventory; and

13                   if the equipment has spare data and video capacity, calculating spare video and  
14 data capacity for the equipment;

15                   ~~determining~~ providing an answer for if the request for service while being  
16 connected to the customer during the customer inquiry ~~should be processed~~ based on the  
17 calculated spare video and data capacity for the equipment.

1                   18.     (currently amended) The method of claim 17, ~~further comprising wherein~~  
2 the answer comprises denying the request for service when no spare video and data capacity  
3 exists.

1                   19.     (currently amended) The method of claim 17, ~~further comprising wherein~~  
2 the answer comprises denying the request for service when spare video and data capacity exists  
3 but the capacity is not sufficient to offer the service to the customer.

1                   20.     (currently amended) The method of claim 17, ~~further comprising wherein~~  
2 the answer comprises approving the request for service when spare video and data capacity  
3 exists.

1                   21.     (currently amended) An apparatus for processing customer requests  
2 ~~determining for~~ spare capacity ~~for in~~ a video and data network from a network element database,  
3 the apparatus comprising logic configured to perform a set of steps comprising:

4                   receiving a customer inquiry for a request for spare capacity in the video and data  
5 network ~~for from~~ a customer requesting a service for the video and data network, wherein the  
6 request comprises a service area identifier corresponding to the customer;

7                   identifying equipment to check for spare capacity from the service area identifier,  
8 wherein the equipment identified is used to provide the service to the customer on the video and  
9 data network;

10                  determining if the identified equipment has spare data and video capacity using  
11 real-time information for the identified equipment in the network element inventory; ~~and~~

12                  if the equipment has spare data and video capacity, calculating spare video and  
13 data capacity for the equipment, wherein the spare video and data capacity is used to provide the  
14 service to the customer, if desired; and

15                    providing an answer for the request for spare capacity while being connected to  
16                    the customer during the customer inquiry, the answer based on the spare video and data capacity  
17                    calculation.

1                    22.    (previously presented) The apparatus of claim 21, wherein the video and  
2                    data network comprises a Digital Subscriber Line (xDSL) network.

1                    23.    (previously presented) The apparatus of claim 21, wherein the video and  
2                    data network comprises a Very high bit rate DSL (VDSL) network.

1                    24.    (previously presented) The apparatus of claim 21, wherein calculating  
2                    spare video/data capacity for the equipment comprises calculating a number of video and data  
3                    ports available minus a number of video and data ports in use.

1                    25.    (previously presented) The apparatus of claim 24, further comprising  
2                    determining possible capacity for the equipment.

1                    26.    (previously presented) The apparatus of claim 25, wherein possible  
2                    capacity comprises possible video/data ports.

1                    27.    (previously presented) The apparatus of claim 26, wherein calculating  
2                    spare video/data capacity for the equipment comprises adding the possible video/data ports to the  
3                    spare video/data capacity calculation.

1                    28.    (previously presented) The apparatus of claim 27, further comprising  
2                    determining a number of defective video/data ports.

1                    29.    (previously presented) The apparatus of claim 28, wherein calculating  
2                    spare video and data capacity for the equipment comprises subtracting the number of defective  
3                    video/data ports from the spare video/data capacity calculation.

1                    30.    (previously presented) The apparatus of claim 24, further comprising  
2                    determining a number of held and pending video service orders for the service area identifier.

1                   31.     (previously presented) The apparatus of claim 30, wherein calculating  
2 spare video and data capacity for the equipment comprises subtracting the number of held and  
3 pending video service orders from the spare video/data capacity calculation.

1                   32.     (previously presented) The apparatus of claim 21, wherein checking the  
2 network element database to determine if the identified equipment has spare data and video  
3 capacity comprises checking if the identified equipment has spare virtual video/data capacity.

1                   33.     (previously presented) The apparatus of claim 21, wherein checking the  
2 network element database to determine if the identified equipment has spare data and video  
3 capacity comprises checking if the identified equipment has spare physical video/data capacity.

1                   34.     (previously presented) The apparatus of claim 24, further comprising  
2 determining a number of data only slots.

1                   35.     (previously presented) The apparatus of claim 34, wherein calculating  
2 spare video and data capacity for the equipment comprises returning the number of data only  
3 slots in the spare capacity calculation.

1                   36.     (previously presented) The apparatus of claim 21, further comprising  
2 checking the network element database to determine if the identified equipment telephony usage  
3 is at a maximum.
